

Bulk Water Storage

Liquimech Bulk Liquid Storage Tanks and Containers provide the ultimate solution for bulk liquid storage challenges.

Engineered for efficiency, durability, and safety, our storage tanks and containers stand as the premier choice for industrial, civil, construction, dewatering, and mining projects across Australia, particularly where space is limited, or rapid setup and mobility are required.

These Storage Tanks are skids-mounted for fast deployment and setup. Their low tare weight allows them to be easily positioned using smaller cranes, offering a highly adaptable solution for quickly deployable, plug-and-play static water storage.

Liquimech Bulk Liquid Storage Tanks and Containers set the standard for industrial water tanks and bulk water storage, providing a safe, reliable, and cost-effective water management solution.

Specifications

- Capacity Range: 30,000 litres (30KL), providing ample storage
- Design: Skid-mounted for quick deployment
- Mobility Features: Container lifters, rated fork pockets, and lifting lugs for easy transport
- Customisation: Modify outlets and configurations to suit specific applications

Features & Benefits

- Robust Design: Built for long-term durability and reliability.
- Ease of Transport: Low tare weight and skid mount design allow for movement with smaller cranes and ease of placement, providing adaptability to changing project requirements.
- Strong Base Design: Ensures stability and easy on-site placement, ready for immediate use.
- Versatile Use: Ideal for both long-term installations and temporary projects.
- Customisable: Outlets, configurations, and additional fittings (pumps, filters, controllers, special liners, etc.) can be tailored to meet specific project requirements.
