Portable Buildings

Brooks' portable container offices can be quickly deployed, from depot to site within days. They come fully equipped with all the features your team needs to stay safe and work efficiently. The containers are painted surf mist white for better temperature control inside the structure and come complete with split air conditioning for those hot and cold days.

All container office units are built with a strong focus on safety and security including internal and external lighting and windows with fly screens, security mesh and a heavy-duty steel personal access door with tri-locking system. The units are construction compliant with all Australian standards and the National Construction Code 2013 and can be supplied with cyclone kits.

Depending on your requirements, a range of internal layouts can also be designed with long-term hire durations.

- Self-contained pump and waste tank
- 1 x High level float activated shutoff valve, designed to activate when waste tank is at 10% above high level alarm.
- Water will shut off and active only when tank is emptied.

Delivery

Side Loader

Side loaders are used to transport our 20 foot and 40 foot shipping containers. This is the best delivery method for containers at sites that have limited space either in front or behind the area where the container is to be positioned. The container is unloaded between the two outrigger feet of the side loader, approximately held a metre from the side of the truck.

Tilt Tray

Tilt tray delivers a container off the back of the truck. Similar to a tow truck, the tray is mechanically lowered at an angle, and the container is slid off, with the truck moving forward at slow speed. This is the most common delivery method used for containers. Tilt trays are not suitable for sites with overhead power lines as the container height increases significantly when tilted.

Hiab Crane

Hiab cranes lift containers from a mechanism located behind the truck's cabin. This is used when there is limited space for a side loader or tilt tray. Using a crane means the container is easily positioned at an angle or up on a raised area. It can also be used to place containers over a fence or other obstacles.
